

KT-1000

Inside Diameter Marking Fixture

The KT 1000 Inside Diameter marking attachment is designed to address the often “awkward” setup and tooling required to mark the inside surface of rings, tubes, etc. A machine tool quality dual ball slide, with height adjustment, is used to support the marking head while it moves into the ID. The standard KwikTurn 5-C cylindrical attachment is used to rotate the part.

Features

- It will add the ability to reach in and mark the inside diameter of a part, while it is turning
- Razor sharp images even in long reach applications
- The KT1000 is modular and easily removable from the KwikTurn 5-C system
- Mounts directly to the T-Slot base of KwikTurn Rotary 5-C
- Ideal for rings, tubes, flanges, etc.
- Precision, rigid ball slide design
- Pivoting head mount for greater versatility
- Attaches to the Kwikmark drive system
