

Sound Enclosure

Engineered Sound Enclosure System

The Sound Enclosure is designed to minimize noise, add operator protection, while providing easy access for machine loading and service. The enclosure features 4 doors, all removable, for access from all sides. Each side has a rubber seal, magnetic latch and large handle. Supplied as a kit with pre-drilled panels, structure elements and hardware for simple assembly with screwdriver and allen keys.

Features

- 3/8 thick polycarbonate panels and doors on all four sides
- All doors have lift/remove hinges and rubber door seals on all four sides and top
- External pneumatic connection and external RS-232 & LAN (network)
- CAD designed and precision machined components
- Extruded aluminum framework precision construction
- 32.5" x 20.5" x 33" tall inside opening
- Bulk head air and electric with outlet strip
- Self standing for bench, cart, etc.
