

TAG MASTER SERIES Automatic Nameplate Feeder

The Tag Master Series is a modular tag feeding device developed for the Kwik Mark dot peen marker. This system will automatically shuttle one tag (from a vertical stack) and position it under the marking head. The tag is "locked down" during the marking cycle.

The magazine may be loaded at any time during operation. Optional adjustable guides are available for applications requiring changeover of different sized tags.

The Tag Master and our markers are manufactured 100% in our plant which houses all production departments and over 25,000 sq ft dedicated to R & D and high tech assembly.

Designed for fully automatic "walk away" production

Features:

- Modular design / internal logic
- Fits onto optional T Slot table
- Ideal for flat parts as well
- Fully automatic operation
- Serialize & date / lot coding capable
- Graphic / logo marking
- Import data from data base / spreadsheets
- Hardened tool steel tracking
- No extra controller required
- Optional adjustable rails for quick changeovers
- Limitless customizing capabilities
